

Compliance Data Logistics

FEBRUARY 2026

THE PROBLEM

Supply chain compliance data is a combinatorial nightmare

- Same information, asked for hundreds of times, in hundreds of different formats
- Spreadsheets, questionnaires, portal logins, PDFs, XMLs — all asking the same questions
- Companies spend more time answering questions than doing actual compliance work

The market is playing the wrong game

- > Software providers aim to **own your data** — analytics, ratings, managed services, lock-in
- > Companies don't need another platform that **captures** their data
- > They need **plumbing** — fast, cheap, secure pipes

They all want to capture your data.

We want to set it free.

OUR THESIS

"We believe the infrastructure for supply chain compliance data should be built for **movement, routing, practical transformation, and safe storage** — not for capturing, analyzing, scoring, or monetizing it."

We are a conduit and a warehouse.
Your data is yours. We just move it and store it.

Compliance data logistics

Supplier Answers Once

Any format in — spreadsheet, PDF, XML,
questionnaire, portal data

Warehoused & Normalized

Stored, validated, and transformed to any
standard or schema

Distributed to Anyone

Any requestor, any format, any regulatory
framework — automatically

*Your suppliers answer once, in any format. We warehouse it, normalize it, and deliver it to every customer who needs it — in whatever format they require. **Your data is yours. We just move it.***

What we refuse to do

✘ **We don't take ownership of your data**

Full export, zero lock-in, at any time

✘ **We don't offer sustainability rankings**

We don't score or judge — we deal in facts

✘ **We don't sell your data**

We are not a data broker or intelligence firm

✘ **We don't build flashy dashboards**

We are infrastructure, not a visualization tool

✘ **We don't swim in greenwashing**

No reporting theater — just the data

✘ **We're not a consulting firm**

We build highways — we don't drive the trucks

A fundamentally different approach

THEY DO	WE DO
Own your data	Store your data — you own it
Score and rate suppliers	Move and verify data
Sell analytics and dashboards	Sell routing and transformation
Months to implement	Get you running fast
Sound like a regulatory filing	Sound like a human being

DISCUSSION

Is the vision right?

"We want to be the global distribution center — the infrastructure layer for supply chain compliance data."

1 Does this match what you need?

2 What's missing from this vision?

3 What would make you go all-in?

What we set out to learn

1

Look and feel of the new platform

First impressions, visual clarity, and overall experience of the rebuilt interface

2

Speed and responsiveness

Performance of the new platform compared to the legacy system

3

Explore new features

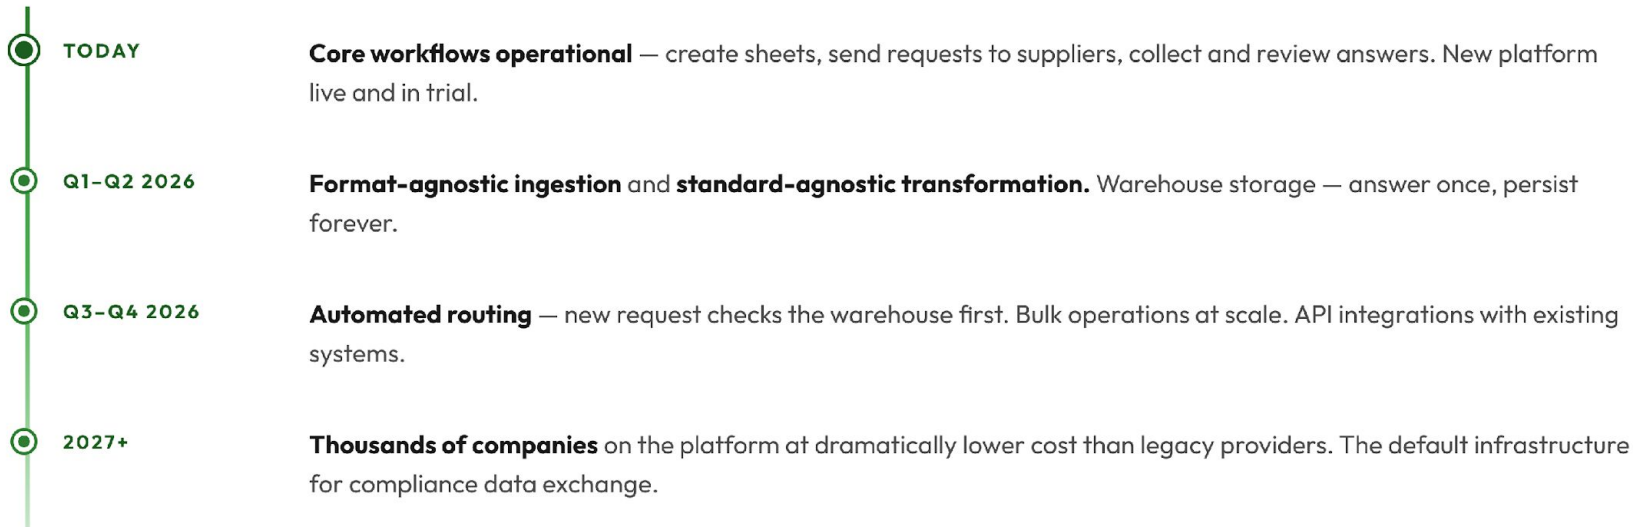

Adding your own custom questions, uploading Excel spreadsheets, and other capabilities not available on the old platform

4

Real-world workflow validation

Creating sheets, sending requests, collecting answers, and reviewing submissions with live data

From workflow tool to infrastructure

PRICING

Simple, transparent, annual

	TIER 1	TIER 2	TIER 3
Active Sheets	Up to 100	Up to 200	Up to 300
Annual Price	\$7,500	\$12,500	\$15,000
Per Sheet	\$75	\$63	\$50

All tiers include

Create & send sheets • Receive & answer sheets • Collaborate • Integrated communications • Process management • Review & verify • Reporting & exports

Enterprise (300+)

Custom pricing for high-volume operations. Contact us for a tailored plan.

Let's build this together.

The infrastructure is ready. The vision is clear.

The question is: are you in?
